Particle Physics, the LHC, the Higgs Particle …
what's happening at CERN?

Abstract:
With the discovery of the Higgs particle at the LHC, the so called Standard Model of particle physics has been completed and confirmed in impressive fashion. In this seminar I will discuss the present status of CERNs experimental program and its day-to-day operation. I will also discuss the present understanding of the subatomic world together with the many unsolved questions. The opportunities for students to conduct diploma thesis or doctoral thesis in many areas of technology development will be discussed as well.
