

GENERAL INFORMATION ABOUT THE JKU CORONAVIRUS SCREENING STATION

To all concerned:

Thank you very much for taking the SARS-CoV-2 rapid antigen test at the JKU's Screening Station. By doing so, you are making a significant contribution to containing the rate of infection in our state and reducing the risk of new infections.

I've taken the test – what's next?

Within the next few hours, you will receive notification regarding your test result to the contact address (e-mail) you provided.

Please note that the e-mail could also end up in your spam folder. If you do not receive an e-mail, please send an inquiry to: corona-test@jku.at.

What could the e-mail say?

The rapid antigen test result is NEGATIVE: A negative test result, however, only captures a snapshot of the moment you were tested. We ask that you please continue to adhere to all safety measures and protocols in place: wear a mask/face covering, maintain your distance from others, wash your hands frequently, and limit your social contact to others.

If you experience any symptoms, please call the Coronavirus Hotline by dialing 1450 or call your primary physician.

The rapid antigen test result is POSITIVE: You are most likely infected with the coronavirus and are therefore considered having a suspected case of the coronavirus. Those who test positive will be informed of the test result shortly after testing via e-mail. Shortly thereafter, the respective district administrative authority will contact you by phone. You will be asked to refrain from any contact with others and you will be required to take a PCR test at one of the drive-thru screening stations. You will be required to quarantine at home pending the results of the PCR test.

Please note: Avoid all unnecessary contact to others and adhere to the current safety measures and protocols in place. You will receive your PCR test result as soon as it becomes available. Until then, we ask that you inform anyone you have been in close contact with over the past two days so that these individuals can monitor their state of health (no isolation necessary).

The rapid antigen test result is INVALID: In rare cases, the test may be invalid for various reasons (due to, for example, faulty sample material). Should this be the case, you may voluntarily take another rapid antigen test when the JKU screening station is open. Please take advantage of this opportunity to be certain about your current state of health and, if necessary, to avoid infecting others.

Thank you for taking this step to keep you and others safe during these unprecedented times!
